Our Aim...

(Objectives)

- Discuss a Historical Perspective highlighting some key highs & lows in the timeline of CP in America

The background is a deep blue space scene. A bright, glowing light source, possibly a star or galaxy core, is positioned in the upper right, creating a lens flare and illuminating the scene. A curved horizon line, likely of a planet, is visible in the lower left. The overall atmosphere is ethereal and futuristic.

State by State Community Paramedicine – Mobile Integrated Healthcare (CP-MIH) Status Board

March 2018

NASEMSO CP-MIH COMMITTEE

This Status Board is intended as a resource for state EMS officials and other EMS leaders to better understand the progress and implementation of CP-MIH in states and locales, and to access legislative and regulatory language, and other tools, from those “who have gone before” in the CP-MIH evolution.

It is based on information reported from an in-process NASEMSO 2017 survey of state EMS offices (Black Print) and updates from state offices, information reported in 2015 from a 2014-15 NASEMSO survey of state EMS offices (Red Print), and from NASEMSO staff experience (Green Print). The survey was a product of the CP-MIH Committee and tested in five states before general distribution.
